

**UNION TOWNSHIP BOARD OF EDUCATION
BLOODBORNE PATHOGEN TRAINING QUIZ
FOR CUSTODIANS**

Circle the correct response: True or False

1. True False If you contract HBV (Hepatitis B) you can put your family at risk of infection.
2. True False It is not necessary to check latex gloves for holes to ensure they will protect you from bloodborne pathogens.
3. True False You must carefully remove latex gloves to minimize your risk of infection.
4. True False Some people infected with HBV show no signs or symptoms and appear healthy.
5. True False The Hepatitis B virus can live on work surfaces for a week or more at room temperature.
6. True False Contaminated surfaces cannot easily lead to the spread of HBV.
7. True False Contact with urine, feces, and vomit can expose you to bloodborne pathogens.
8. True False Bloodborne infections can be transmitted through an open cut or through common skin conditions like dermatitis.
9. True False To effectively disinfect surfaces and cleaning tools you may use one part bleach to 10 parts water.
10. True False Jobs that carry risks of exposure are identified in your school's Exposure Control Plan.
11. True False You should regularly inspect and disinfect re-usable containers such as trash cans, bins and pails, that might become contaminated.
12. True False Any blood, or body fluid containing visible blood, could be infected with bloodborne pathogens.
13. True False Personal Protective Equipment, such as a resuscitation device, or latex or vinyl gloves, provides a physical barrier between you and a victim's potentially infected body fluids.
